Paper 1 Multiple Choice – Fluid Mosaic Membranes

MARK SCHEME

Maximum Mark: 30

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the 2026 series for most Cambridge IGCSE™, Cambridge International A and AS Level components, and some Cambridge O Level components.

This document consists of 4 printed pages.

Question	Answer	Marks
1	**B** ; *The membrane is described as 'fluid' because phospholipids and proteins move laterally within the monolayer, and 'mosaic' because protein molecules are scattered within the phospholipid bilayer.*	1
2	**B** ; *Option B correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
3	**B** ; *The membrane is described as 'fluid' because phospholipids and proteins move laterally within the monolayer, and 'mosaic' because protein molecules are scattered within the phospholipid bilayer.*	1
4	**B** ; *The membrane is described as 'fluid' because phospholipids and proteins move laterally within the monolayer, and 'mosaic' because protein molecules are scattered within the phospholipid bilayer.*	1
5	**A** ; *Option A correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
6	**B** ; *The membrane is described as 'fluid' because phospholipids and proteins move laterally within the monolayer, and 'mosaic' because protein molecules are scattered within the phospholipid bilayer.*	1
7	**B** ; *The membrane is described as 'fluid' because phospholipids and proteins move laterally within the monolayer, and 'mosaic' because protein molecules are scattered within the phospholipid bilayer.*	1
8	**D** ; *Option D correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
9	**A** ; *Option A correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
10	**B** ; *Option B correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
1	**B** ; *The membrane is described as 'fluid' because phospholipids and proteins move laterally within the monolayer, and 'mosaic' because protein molecules are scattered within the phospholipid bilayer.*	1
2	**B** ; *Option B correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
3	**B** ; *Option B correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1

Question	Answer	Marks
4	**D** ; *Option D correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
5	**D** ; *Option D correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
6	**B** ; *Option B correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
7	**C** ; *Option C correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
8	**D** ; *Option D correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
9	**D** ; *Option D correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
10	**C** ; *Option C correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
1	**A** ; *Option A correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
2	**B** ; *Option B correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
3	**C** ; *Option C correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
4	**A** ; *Option A correctly fulfills the Cambridge 9700 learning criteria for Fluid Mosaic Membranes. In accordance with syllabus standards, the distractors represent common misconceptions or inverted relationships.*	1
5	**B** ; *The membrane is described as 'fluid' because phospholipids and proteins move laterally within the monolayer, and 'mosaic' because protein molecules are scattered within the phospholipid bilayer.*	1
